

VIGNESH S

Backend Software Engineer | Payment Systems & Fintech

Chennai, India | +91 6382303714 | vickyseeman2017@gmail.com | [linkedin.com/in/vignesh8474](https://www.linkedin.com/in/vignesh8474) | github.com/vignesh8474

SUMMARY

Backend Software Engineer with 2+ years of experience designing high-throughput payment processing platforms in Go. Hands-on experience building distributed payment services, optimizing transaction throughput, writing atomic Redis Lua scripts, and integrating banking APIs for payins and payouts. Skilled in securing payment pipelines with AES-256 and AWS KMS and orchestrating cloud infrastructure on AWS.

SKILLS

- **Languages & Core:** Go (Golang), Java, SQL, JavaScript, Lua
- **Backend & Architecture:** Microservices, Distributed Systems, Event-Driven Architecture, REST APIs, Clean Architecture, CQRS, Gin
- **Databases & Caching:** PostgreSQL, Amazon Aurora, DynamoDB, MongoDB, Redis (Lua Scripting), Valkey
- **Cloud & Messaging:** AWS (EC2, S3, KMS, RDS, DynamoDB, Lambda, SQS, SNS, CloudWatch), RabbitMQ
- **DevOps & Monitoring:** Docker, Kubernetes (Basics), Terraform, GitHub Actions, GitLab CI, Grafana
- **Security & Practices:** RBAC, Multi-Factor Authentication (MFA), AES-256, AWS KMS, JWT, Test-Driven Development (TDD)

EXPERIENCE

Backend Software Engineer — Elixir Global

Chennai, India | June 2026 – Present

- Engineered a unified payment orchestration platform in Go across payment aggregators and banking partners, eliminating double-charge anomalies under peak traffic.
- Built modular Go microservices to generate on-demand payment links, automated invoices, and manage chargeback dispute flows.
- Strengthened platform security by implementing Multi-Factor Authentication (MFA) and granular RBAC controls across merchant management portals.
- Decreased database read latency by 45% by separating transactional events into Amazon DynamoDB and financial settlement ledgers into Amazon RDS (PostgreSQL).
- Reduced relational database query load by 60% by deploying Valkey as a distributed session and caching tier for instant payment lookups.
- Lowered dispute resolution turnaround by 30% by developing an asynchronous notification service delivering sub-second webhook and in-app alerts.

Backend Developer — Flipopay Technology

Chennai, India | February 2024 – May 2026

- Developed 15+ RESTful APIs in Go (Gin) managing high-volume multi-currency transactions and automated merchant payout workflows.
- Integrated direct banking partner APIs for real-time payins and automated bulk payouts, managing webhook confirmations and idempotency keys.
- Authored atomic Redis Lua scripts to execute wallet debits, rate-limiting, and distributed locking, preventing race conditions during traffic surges.
- Lowered API response latency by 40% and compute overhead by 50% by refactoring validation logic and caching repetitive gateway query payloads in Redis.
- Secured cardholder workflows by implementing granular Role-Based Access Control (RBAC) approvals and AES-256 encryption at rest integrated with AWS KMS.
- Accelerated end-of-day banking reconciliation routines by 35% by rewriting complex SQL aggregation pipelines and optimizing Aurora PostgreSQL indexes.
- Prevented dropped transactions by transitioning payment and refund notifications to resilient asynchronous RabbitMQ queues.
- Decreased deployment regressions by 25% by creating GitHub Actions CI/CD workflows and achieving 80%+ test coverage through rigorous TDD practices.

PROJECTS

Full-Stack URL Shortener Platform

Go, Redis, PostgreSQL, REST APIs

- Architected a URL shortener featuring a high-concurrency Go backend and responsive web client, achieving sub-10ms redirect latency using Redis caching.
- Implemented custom base62 encoding, automated link expiration, rate-limiting, and real-time click analytics tracking for distributed web and payment redirection.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering

S. A. Engineering College, Chennai | 2019 – 2023 | CGPA: 8.12

CERTIFICATIONS

- Docker & Kubernetes — Udemy
